Practice Questions

These practice questions are to help you understand how to show your answer for different types of questions.

P01. Who is holding a card with an even number on it?

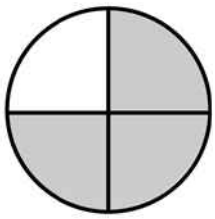

- ⬭ Ben
- ⬭ Eru
- ⬭ Aroha
- ⬭ Davina

P02. Complete this number pattern.

2, 4, ____, ____, 10

P03. What fraction of this circle is shaded?

☐

———

☐

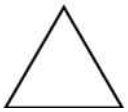

ADMINISTER ONSCREEN ONLY

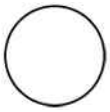

P04. Match the sentence with the correct shape.

☐ 1. I have three sides

☐ 2. I have 4 sides

a. 

b. 

c. 

P05. Which numbers make this number sentence **TRUE**?

☐ 1

☐ 2

☐ 3

☐ 4

☐ 5

P06. Put the numbers 1, 2, 3, and 4 in the boxes to order these numbers from biggest (1) to smallest (4).

☐ 3

☐ 7

☐ 2

☐ 0

ADMINISTER ONSCREEN ONLY

P07. Select whether the following statements are True or False.

	TRUE	FALSE
In the number 213, the value of 1 is ten.	⬭	⬭
In the number 504, the value of 5 is fifty.	⬭	⬭

ADMINISTER ONSCREEN ONLY

01. Which number sentence is **TRUE**?

- ⬭ 968 < 698
- ⬭ 968 < 689
- ⬭ 968 > 689
- ⬭ 968 = 689

02. Hiram read about a "Buy 2, Get 1 Free" sale on socks. If he buys 2 pairs of socks, he will get the 3rd pair free. He started the list below to find out how many free pairs of socks he would get.
What is the ***least*** number of pairs of socks Hiram would have to buy in order to get 4 free pairs?

Buy	Free Pairs
2	1
3	1
4	2
5	2

- ⬭ 7
- ⬭ 8
- ⬭ 9
- ⬭ 12

03. Iris is writing music for a video game. The picture below shows how a pattern of 5 notes repeats while the game is played.
If the pattern continues, what kind of note will be the 12th note played?

- ⬭ 
- ⬭ 
- ⬭ 
- ⬭ 

04. What is the rule used in the table below?

Input	Output
1	3
2	6
3	9
4	?

- ⬭ Add 2 to the input
- ⬭ Multiply the input by 2
- ⬭ Add 3 to the input
- ⬭ Multiply the input by 3

05. If $k = 6$, what is the value of $7k - 2$?

- ⬭ 30
- ⬭ 40
- ⬭ 54
- ⬭ 65

06. Shani saved three times as much money as Bill.
If Bill saved d dollars, which expression shows how much money Shani saved?

- ⬭ $3d$
- ⬭ $\frac{d}{3}$
- ⬭ $d + 3$
- ⬭ $d - 3$

ADMINISTER ONSCREEN ONLY

07. Naomi picked y flowers and will put an equal number of flowers in n vases.
Which expression represents the number of flowers Naomi will put in each vase?

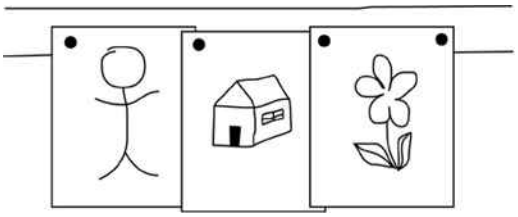

- ⬭ $\frac{n}{y}$
- ⬭ $n - y$
- ⬭ $\frac{y}{n}$
- ⬭ $y - n$

08. The table shows the relationship between *j* , Jerry's age and *t*, Tara's age.
Which of the following describes the relationship?

j (Jerry's Age)	1	2	3	4	5
t (Tara's Age)	7	8	9	10	11

- ⬭ $t = j + 6$
- ⬭ $t = 2j + 1$
- ⬭ $t = 2j + 2$
- ⬭ $t = 6j$

09. Children's pictures are to be hung in a line as shown in the figure below. Pictures that are hung next to each other share a tack.
How many tacks are needed to hang 28 pictures in this way?

- ⬭ 27
- ⬭ 28
- ⬭ 29
- ⬭ 56

Use the following information to answer question10..

ADMINISTER ONSCREEN ONLY

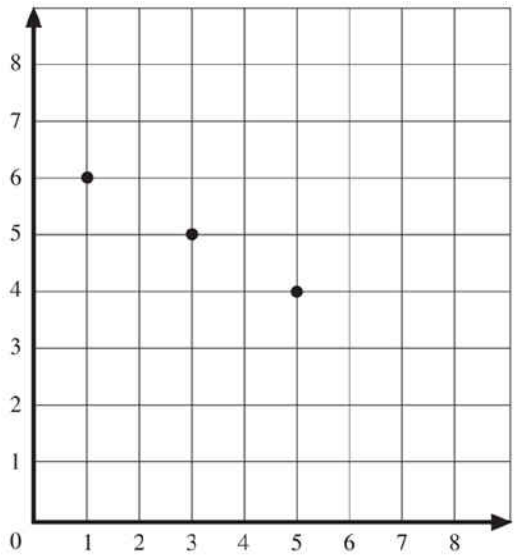

10. Allie has $32.50.
Which is the **BEST** estimate of the heaviest item she can ship?

- ⬭ 50 kg
- ⬭ 45 kg
- ⬭ 20 kg
- ⬭ 15 kg
- ⬭ 10 kg

End of Section

11. Chu plotted 3 points on a grid. The 3 points were all on the same straight line. If she plots another point on the line, what could be its coordinates?

- ⬭ (2, 5)
- ⬭ (4, 4)
- ⬭ (6, 3)
- ⬭ (7, 3)

ADMINISTER ONSCREEN ONLY

12. In the centre section of an auditorium, each row has 2 more seats than the row in front of it.
The front row of the section contains 23 seats.
How many seats are in the 10th row from the stage?

- ⬭ 33
- ⬭ 39
- ⬭ 41
- ⬭ 43

13. 42, 51, 49, 58, 56, . . .
If the pattern in the list above continues, what will be the next number after 56?

- ⬭ 54
- ⬭ 63
- ⬭ 64
- ⬭ 65
- ⬭ 67

14. City bus No. 14 arrives at Grand Street every 10 minutes, starting at 6:00 am.
The dispatcher is setting the schedule for an additional bus that will arrive at Grand Street every 20 minutes. The dispatcher does **NOT** want the two buses to arrive at Grand Street at the same time.

Which of these starting times will be **BEST** for the additional bus?

⬭ 6:00 am

⬭ 6:05 am

⬭ 6:10 am

⬭ 6:30 am

15. The first five terms in a geometric sequence are shown below.
2, 8, 32, 128, 512, . . .
What is the next term in the sequence?

⬭ 896

⬭ 1024

⬭ 1536

⬭ 2048

16. A telephone company charges $0.05 per minute for local calls and $0.12 per minute for long-distance calls.
Which expression gives the total cost in dollars for x minutes of local calls and y minutes of long-distance calls?

⬭ $0.05x + 0.12y$

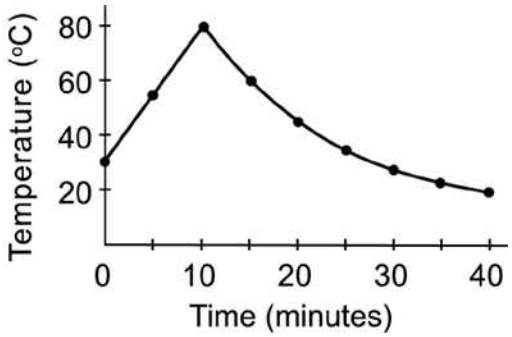

⬭ $0.05x - 0.12y$

⬭ $0.17 (x + y)$

⬭ $0.17xy$

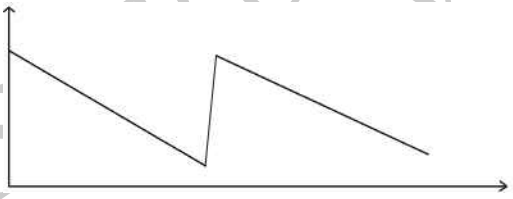

ADMINISTER ONSCREEN ONLY

17. The graph below **BEST** conveys information about which of the following situations over a 40-minute period of time?

- ⬭ Oven temperature while a cake is being baked
- ⬭ Temperature of water that is heated on a stove, then removed and allowed to cool
- ⬭ Ocean temperature in February
- ⬭ Body temperature of a person with a cold
- ⬭ Temperature on a July day

18. Which of the following real-world situations could **BEST** be modelled by the following graph?

- ⬭ The height of a person growing from child to adult
- ⬭ The temperature of a cake after it is taken out of the oven
- ⬭ The height of an airplane landing on a runway
- ⬭ The amount of petrol in a car tank during a long trip

19. Mark reads 14 pages per hour and Jesse reads 8 pages per half an hour. Which of the following statements compares these rates?

- ⬭ Mark reads 6 pages per hour faster than Jesse.
- ⬭ Mark reads 2 pages per hour faster than Jesse.
- ⬭ Jesse reads 6 pages per hour faster then Mark.
- ⬭ Jesse reads 2 pages per hour faster than Mark.

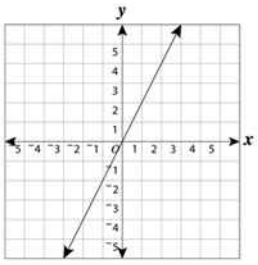

20. What is the solution to $10x + 13 = 17$?

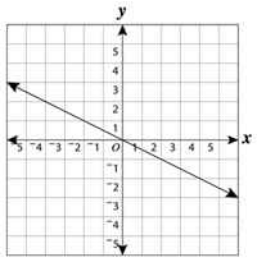

- ⬭ $x = 0.3$
- ⬭ $x = 0.4$
- ⬭ $x = 3.0$
- ⬭ $x = 4.0$

21. Which is a graph of a line that contains all the points in this table of ordered pairs?

x	y
-4	-2
0	0
2	1

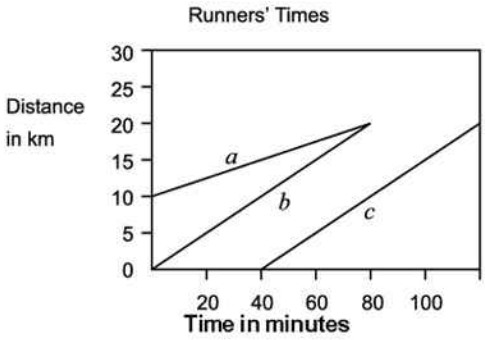

ADMINISTER ONSCREEN ONLY

22. Hilary has $9 less than Barbara. Together they have $21.
If x represents Barbara's money, which of the following expresses this relationship?

- $(x + 9) + x = 21$
- $(x - 9) + x = 21$
- $x - 9 = 21 + x$
- $x = 21 + x - 9$

23. The graph below shows the relationship between the different times and distances for three runners (*a, b,* and *c*) at a track meet.
Based on the graph, which statement is **TRUE**?

- ⬭ Runners a and c have equal times, but they ran different distances.
- ⬭ Runners a and b have equal times, and they ran equal distances.
- ⬭ Runners b and c have different times, but they ran equal distances.
- ⬭ Runners a , b and c all ran the same distance.

24. Part of the statement below is in bold.
7*x* + 9 = 45
Which **BEST** describes the bold part of the statement?

- ⬭ Coefficient
- ⬭ Variable
- ⬭ Term
- ⬭ Expression

ADMINISTER ONSCREEN ONLY

25. What is the value of x - (3x + 5) when x = -2?

- ⬭ -1
- ⬭ 1
- ⬭ 5
- ⬭ 9

26. Julia and Marcia bought identically priced cans of chilli and identically priced jars of salsa to make a dip.
• Julia bought three cans of chilli and two jars of salsa for $10.07.
• Marcia bought two cans of chilli and four jars of salsa for $12.98.
Which of the following systems of equations could be used to find x, the cost of one can of chilli, and y, the cost of one jar of salsa?

⬭ $x + y = 10.07$
$x + y = 12.98$

⬭ $10.07x + 12.98y = 11$
$x + y = 11$

⬭ $2x + 4y = 10.07$
$2x + 3y = 12.98$

⬭ $3x + 2y = 10.07$
$2x + 4y = 12.98$

27. The following table shows the total number of line segments that can be drawn connecting two points in a set of coplanar, noncollinear points.
How many line segments can be drawn connecting two points in a set of 11 noncollinear points?

Number of Points	3	4	5	6	···	10	11
Number of Line Segments	3	6	10	15	···	45	?

⬭ 55
⬭ 50
⬭ 48
⬭ 110

28. Solve the equation $3(2x - 4) = -9$

$x =$_____
